Towards the End of Tuberculosis in the WHO European Region

The best practices and good practices compendiums are available only in English-language versions.

Learn more about TB in the Region

Best practices in prevention, control and care for drug-resistant tuberculosis (2013)

With examples from nearly half the Region, this compendium of best practices related to drug-resistant TB is an invaluable resource for stakeholders at all levels of the health system in their efforts to stop TB.

Good practices in health systems strengthening for prevention and care of tuberculosis and drug-resistant tuberculosis (2015)

This compendium provides examples from high- and low-TB-incidence countries that address health system challenges to fighting TB in the Region. It supports implementation of the TB action plan 2016–2020 and is a valuable resource for enabling countries to share good strategies that could be adapted to other country contexts and settings.

The best practices and good practices compendiums are available only in English-language versions.

Towards the End of Tuberculosis in the WHO European Region

People at the centre of care

Civil society and communities have a paramount role in TB prevention and care. In implementing the new TB action plan, we need to make a paradigm change in the way we do business and focus much more on the social and human aspects to curb the spread of drug-resistant TB.

Fanny Voitzwinkler, Global Health Advocate, TB Europe Coalition

I was in a serious condition – mentally already dead and physically almost departing life. Relatives visited me one after another and it seemed like those were our last meetings. Tragically, this was after I had already lost my two brothers to MDR-TB. Treatment included six months of painful injections and two years of a cocktail of 11 tablets with severe side-effects. I was tempted to stop treatment several times. But encouragement from my doctor, the care of my nurses, who looked after me like a son, and the love of my family helped me through it. Now I am a healthy man again. I strongly believe we need to have shorter and more effective treatment options if we do not want patients to lose their determination to carry on, and we need them right now.

Safarli Naimov, former MDR-TB patient

Perspectives on TB in the Region

Countries in the WHO European Region are in a prime position to lead the effort to end tuberculosis. Health 2020, the European health policy framework, offers a unique platform from which relevant sectors can work together to achieve effective care centered on patients’ needs. This is what the Tuberculosis action plan for the WHO European Region 2015–2020 is all about. The plan will support actors to collaborate in integrated and innovative ways to ensure that our children can live in a world free of TB.

Zsuzsanna Jakab, WHO Regional Director for Europe

Civil society and communities have a paramount role in TB prevention and care. In implementing the new TB action plan, we need to make a paradigm change in the way we do business and focus much more on the social and human aspects to curb the spread of drug-resistant TB.

Safarli Naimov, former MDR-TB patient
Much progress has been made in the fight against tuberculosis (TB) in the WHO European Region over the last five years. The Consolidated action plan to prevent and combat multi- and extensively drug resistant (M/XDR) tuberculosis (TB) 2011–2015 provided a powerful tool to support European countries in reducing new TB cases and deaths. On average, the number of TB cases has dropped by about 6% annually. TB continues to be a serious public health issue in the Region; however, ongoing challenges need to be addressed if progress is to be made in the move towards ending the TB epidemic.

**Key achievements from the consolidated action plan 2011–2015**

The plan has resulted in:

- more than 1 million TB patients, including 53,000 with multidrug-resistant TB (MDR–TB), being cured
- approximately 240,000 MDR–TB cases being verified
- more than 26 million lives being saved

**Key facts and figures on TB in Europe**

- Europe has a high burden of MDR–TB and extensively drug-resistant TB (XDR-TB), with 15 of the 25 countries with the highest burden of MDR–TB being in the European Region.
- Fewer than half of all MDR–TB patients were successfully treated in 2013.
- TB prevention and care is incomplete: 360,000 people fall ill with TB annually (1000 daily), of whom 25,000 are infected with MDR–TB and 36,000 are from TB.

**Regional TB Health System Strengthening Project 2016–2018**

The WHO Regional Office for Europe has been working with partners, including the Centre for Health Policies and Studies in the Republic of Moldova and the Global Fund to Fight AIDS, Tuberculosis and Malaria (GFATM), on a regional TB project covering 11 countries.

The project aims to support countries in improving the performance of their health systems to ensure better TB prevention and care, including drug-resistant TB. This will be addressed through:

- increasing advocacy and political commitment to ending TB;
- sharing evidence and support to build capacity in countries;
- supporting countries in implementing health system reforms with efficient and patient-centred models of TB services that have sustainable financing.

Project activities will play an important role in implementing successfully the TB action plan 2016–2020 and achieving its goals and targets.

**The role of health systems**

Well functioning national health systems are essential to effectively addressing the spread of TB. Prevention and control of TB is complex and requires action from all levels of the health system. Action needs to be appropriate, efficient and, not least, collaborative.

Despite notable progress, several countries in the Region continue to face challenges in providing high-quality TB services. There is a need to update service delivery models, continuously improve the quality of care, access to new technologies and quality second-line drugs (Table 1).

**Table 1. Health system challenges to fighting TB in the Region**

<table>
<thead>
<tr>
<th>Challenge</th>
<th>Percentage of MDR–TB among new TB cases in the WHO European Region</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Large variation in public spending on health</td>
<td>&lt;1</td>
</tr>
<tr>
<td>- Serious inefficiencies in health systems</td>
<td>1–9</td>
</tr>
<tr>
<td>- Weak coordination across sectors</td>
<td>2–5.9</td>
</tr>
<tr>
<td>- Overinvestment in secondary and tertiary (hospital-based) care</td>
<td>&gt;6–9.9</td>
</tr>
<tr>
<td>- Underinvestment in outpatient and primary health care</td>
<td>&gt;10</td>
</tr>
<tr>
<td>- Payment mechanisms that do not facilitate reconfiguration of existing services or collaboration across the health system</td>
<td>&gt;15</td>
</tr>
<tr>
<td>- Insufficient access to M/XDR–TB drugs</td>
<td>&gt;20</td>
</tr>
<tr>
<td>- Primary health care workers not sufficiently trained</td>

</table>

**Regional TB Health System Strengthening Project 2016–2018**

The WHO Regional Office for Europe has been working with partners, including the Centre for Health Policies and Studies in the Republic of Moldova and the Global Fund to Fight AIDS, Tuberculosis and Malaria (GFATM), on a regional TB project covering 11 countries.

The project aims to support countries in improving the performance of their health systems to ensure better TB prevention and care, including drug-resistant TB. This will be addressed through:

- increasing advocacy and political commitment to ending TB;
- sharing evidence and support to build capacity in countries;
- supporting countries in implementing health system reforms with efficient and patient-centred models of TB services that have sustainable financing.

Project activities will play an important role in implementing successfully the TB action plan 2016–2020 and achieving its goals and targets.

**Key targets for 2020**

- 35% reduction in TB deaths
- 10% fewer cases of TB compared to 2015
- 75% of all diagnosed M/XDR–TB patients successfully treated

**Expected achievements by 2020**

- More than 3.1 trillion lives and US$ 48 billion will have been saved
- Approximately 1 million TB patients and have been cured
- Approximately 17 million new cases of all forms of TB will have been prevented

The TB action plan 2016–2020

A new TB action plan for 2016 to 2020 has been developed to build on the achievements of the consolidated action plan 2011–2015 and address emerging challenges.

The Tuberculosis action plan for the WHO European Region 2016–2020 is the result of wide consultation coordinated by the Regional Office that included Member States and key stakeholders. It is aligned with the global End TB strategy, which has been endorsed by the World Health Assembly, and Health 2020, the European health policy framework.

The TB action plan 2016–2020 aims to prevent the emergence and transmission of TB and drug-resistant TB by ensuring universal access to improved services for prevention, diagnosis and treatment in all Member States of the European Region by 2020. It:

- addresses TB as an intersectoral challenge that requires a strong health system at all levels and the collaborative efforts of all sectors and partners, including civil society and communities;
- promotes patient-centred models of care and tailored services for specific populations such as migrants, people who are addicted to drugs and inmates of prisons, and promotes inclusion of social determinants and underlying risk factors for TB;
- catalyses operational research and encourages innovation and fast uptake of new tools, interventions and strategies; and
- sets ambitious targets for countries heavily affected by TB and drug-resistant TB and aims for TB elimination in countries with a low TB burden.

Successful implementation of the action plan requires strong political commitment and the will to implement bold policies and secure sustainable and efficient financing mechanisms.
