**Aim**

The aim of the international training is to inform and empower participants to raise the priority accorded to noncommunicable diseases (NCD) in development work at global and national levels, and to integrate prevention and control of such diseases into policies across all government departments. The seminar also aims to help to improve their national intersectoral programmes. The seminar will offer the opportunity for participants to understand different aspects of working across sectors related to expertise and competencies, project management, and governance and will give an overview of available tools.

**Objectives**

The seminar is aimed at middle to high level health policy decision makers and aims to:

- promote interventions to reduce the main shared modifiable risk factors for NCD: tobacco use, unhealthy diets, physical inactivity and harmful use of alcohol.
- develop a better understanding of the decision-making process and context for development and implementation of NCD fiscal policies.
- help to establish and strengthen national fiscal policies for the prevention and control of NCD.
- share examples of NCD fiscal policy action, advocacy strategies and tools.
- promote partnership and leadership for the prevention and control of NCD.
- promote better stronger linkages between research and policies to support action.
- improve skills and capacity of promotion approaches into NCD policies and interventions.

**Method**

The seminar combines medical and psychosocial behavioral theories with practical examples of NCD prevention programs and strategies. Practical and interactive methods to study empowerment and leadership possibilities in NCD control and prevention will be used. Several WHO and other international strategies will serve as background:

- the Action plan for implementation of the European strategy for the prevention and control of NCDs.

---

The seminar will be focused on fiscal policies in the areas of tobacco, alcohol and nutrition. Participants will have the opportunity not only hear presentations from the experts but also to analyze problems from different sides including epidemiology, policy, leadership, politics etc. Most of the seminar activities will be interactive, involving participants in active discussions and planning. That will ensure continuum and a deeper understanding of the complexity of prevention and control of NCD risk factors, implementation of the main “health in all policies” philosophy and will also facilitate networking between participants, researchers and academia.

Faculty

Professor Vilius Grabauskas, Chancellor of the Lithuanian University of Health Sciences, Director of the WHO Collaborating Centre for the Prevention and Control of NCDs, Co-director of CINDI
Professor Sylvie Stachenko, professor of the University of Alberta, Co-director of CINDI.
Dr. Gauden Galea, Director of the division of NCD and Health Promotion at WHO Regional Office for Europe.
Professor Ken Zakariasen, Professor at University of Alberta, Canada.
Assoc. professor Aurelijus Veryga, Head of Health Research Institute at Lithuanian University of Health Sciences.
Annalisa Belloni, Health Policy Analyst, OECD.
Dr Mike Rayner, British Heart Foundation Health Promotion – Research Group.
Dr Esa Österberg, Senior Researcher, Department of Alcohol, Drugs and Addiction National Institute for Health and Welfare, Finland.
Tor Christensen, Senior advisor Environment and Energy, Ministry of Taxation, Denmark.
Kristina Mauer-Stender, Program Manager, Tobacco Control program, WHO Regional Office for Europe.

Other visiting experts.

Organizers

The Seminar will be organized by the Health Research Institute (HRI, Lithuanian University of Health Sciences) and University of Alberta in collaboration with WHO. HRI is a WHO Collaborating Centre for Noncommunicable Disease Prevention, Health Promotion and Monitoring.

Venue

The interactive seminar will last for three days and will take place from 24-26 September 2012, in Biržtonas, Lithuania.
