HEN report uptake summary

HEN publishes synthesis reports that aim to support public health decision-makers in the WHO European Region to formulate health policies based on the best available evidence. To understand how each HEN synthesis report is disseminated, shared, discussed and used and contributes to public health decision-making, the HEN Secretariat analyses the uptake of each report. The HEN Secretariat assess the short- and long-term (up to one year) reach of each HEN report and summarizes the findings in a brief format.

Title
HEN 52. Key policies for addressing the social determinants of health and health inequities

Other notable mentions:

- Cited in an online forum by the rental housing task force in British Colombia, Canada to discuss a fair and balanced housing system. The HEN synthesis report was included in a scoping review of rental housing research: Discussion 1: a fair and balanced system.

Added values described by commissioners, reviewers and others

The document emphasizes that the application of combinations of these successful policies together with an effective governance for equity in health matters should allow the Member States of the European Region to reduce health inequities and synergize efforts to address social determinants and achieve the objectives of Sustainable Development of the United Nations. I think that, keeping the proportions and specificities of each territory, it would help Panama achieve the pending objective of reducing health inequities.
